DETAILED ACTION

EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

The application has been amended as follows:

Claim 8 has been canceled. The reason for this is based on the amendment filed 09/13/2004, in which claim 8 was previously cancelled, and now it is indicated as currently amended. A claim which was previously canceled may be reinstated only by adding the claim as a "new" claim with a new claim number. 37 CFR 1.121(c)(5).

Claim 11 has been added by the Examiner as a replacement of the above canceled claim 8.

The amendments to claim 11 is listed below:

11. (New) The image sensor according to claim 4, wherein the CCD register has a charge overflow barrier and a charge overflow drain incorporated in at least one of its stages to prevent charge blooming in the direction of charge transfer.

Allowable Subject Matter

Claims 1-4, 6, 9, and 11 are allowed.

The following is an examiner's statement of reasons for allowance:

As for claim 1, the prior art does not teach or fairly suggest the use of a solid-state image sensor having a readout architecture having a first and second CCD register having a width that varies in proportion to the increasing amount of charge depending on the number of CCD stages that include charge multiplication devices.

As for claim 4, the prior art does not teach or fairly suggest the use of a solid-state image sensor having a readout architecture having a CCD register having a progressively wider width, wherein the width of the register and the number of charge multiplication elements varies according to a predetermined formula.

As for claim 9, the prior art does not teach or fairly suggest the use of a solid-state image sensor having a readout architecture having a CCD register having a width and a number of charge-multiplication elements that varies according to a predetermined formula which has an exponential dependency on the number of CCD stages that include charge multiplication devices.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
